

In re Application of:
Mulligan

Group Art Unit: 2173
Examiner: Kieu D. Vu

Atty. Dkt. No. 5298-05300

I hereby certify that this correspondence is being transmitted via facsimile or deposited with the U.S. Postal Service with sufficient postage as First Class Mail in an envelope addressed to:
Commissioner for Patents, Washington, D.C. 20231, on the date indicated below:

04/25/2005
Date

Kevin L. Daffer

Commissioner for Patents
Washington, D.C. 20231

1. I am a named inventor in the above-identified patent application, which is a U.S. patent application, Serial No. 09/826,998, filed April 3, 2001.

2. I have been informed that in the present application, certain claims have been rejected on reference to Chaudhry, U.S. Patent No. 6,721,944, issued April 13, 2004 and filed provisionally on May 31, 2000.

3. As set forth in more detail below, I conceived the subject matter claimed in the present application within the United States before May 31, 2000. The subject matter includes a method for generating computer executable code, where the method includes creating a data set by modifying a comments portion of a program, and where the step of modifying includes activating a user-selectable link embedded within the comments portion.

4. Exhibit A attached hereto is a true copy of the invention disclosure consisting of four (4) pages which evidences our conception date before May 31, 2000. The invention disclosure is only one example of an earlier conception date of our invention set forth in the claims of our captioned patent application. The actual date for first drawings, the first written description, and the first oral disclosure to others has been redacted from the Exhibit A.

REDUCTION TO PRACTICE AND DILIGENCE

10. From at least a time just prior to May 31, 2000 through the filing of the application on April 3, 2001, plans were undertaken to prepare the captioned patent application, which was commissioned to Kevin Daffer at Conley, Rose & Tayon, P.C. We did not abandon, suppress, or conceal the ideas set forth in the claimed invention during at least the time beginning just prior to May 31, 2000 through the filing of the application on April 3, 2001.

11. Upon information and belief, it is our informed understanding that diligence in reducing the invention to practice was therefore maintained from at least as early as May 31, 2000 through the filing of the application on April 3, 2001.

12. I hereby declare that all statements made herein of my own knowledge are true and that all statements made herein on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. § 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Date: 02/28/2005

(Give Full Contract Number)

The description of invention should be written in the inventor's own words and generally should follow the outline given below. Sketches, prints, photos, and other illustrations, as well as memos or reports of any nature in which the invention is referred to, if available, should form a part of this disclosure and reference and be made thereto in the descriptions of the invention's construction and operation.

FOR ANSWERS TO THE FOLLOWING QUESTIONS, USE THE REMAINDER OF SHEET AND THE ATTACHED SHEET(S).

1. General purpose of invention. State in general terms the objects of the invention.
 2. Describe old technology, if any, for performing the function of the invention. Provide references, if available.
 3. Indicated the disadvantages of the old technology.
 4. Describe your invention and its construction, showing the changes, additions and improvements over the old method.
 5. Give details of its operation (i.e., how is your invention used?), if not already described under 4.
 6. State the advantages of your invention over what has been done before.
 7. Indicated any alternate component(s) and/or method(s) of construction.
 8. If a joint invention, indicate what contribution was made by each inventor.
 9. Describe the features that are believed to be new.
 10. State opinion of relative value of invention.
 11. After the disclosure is prepared, it should be signed by the inventor(s) and then read and signed by two witnesses in the space provided at the bottom of each sheet.

CYPRESS SEMICONDUCTOR

CYPRESS SEMICONDUCTOR INVENTION DISCLOSURE FORM

General purpose of invention:

Generation of program comments translated directly into program code.

Old technology: Manual generation of program code in a text editor.

Disadvantages of the old technology: Takes more time, is error prone, and requires subsequent generation of program comments.

Description of invention:

"Hot Code" uses a GUI where an embedded CPU source file is displayed in a text editor, along with support code to complete a working program. The comments section of the program code has active "hot spots" (similar to internet URL's) that are used to select different configuration options and also to select the behavior and timing of generated program code. The "hot spots" produce dropdown menus when selected.

The comments section represents an active tool for the configuration of the code, which appears in the same window below the comments. The comments are automatically generated by user selection of dropdown options, and the resulting code is modified immediately, so the user can evaluate the resulting code while always viewing the code (and comments) itself. There is no context switch necessary for the user - they are always looking at the changing code itself.

The result is a complete program that is self-documented.

State the advantages of your invention over what has been done before:

The user does not need to use an "app builder" like tool, which generates code at the end of the process.

They are always working in the "program code" domain.

Hot Code takes modifiable comment fields and turns them into program code automatically (within the same view - which is a view of the program code), as opposed to a "wizard" type interface which does not allow subsequent modifications of the output from the wizard.

Describe the features that are believed to be new:

Configurable comments section with GUI within a text editor.

Automatic and instant translation of program comments to code.

Comments section can contain "tool tips" (pop-up suggestions) to assist in the selection of options.

With "Hot Code", the user is working in the context of the comments and existing code - where the comments provide the necessary comments relevant to the program domain.

State opinion of relative value of invention:

Serves as a general GUI for the documentation and configuration of program code.

Serves as a general GUI for the configuration of any embedded environment.
